TIBCO Cloud Integration - Automate (Automation Solution)

TIBCO Cloud Integration Automate (previously known as Live Apps) is a low-code case management application that will create a new case whenever an event is received for the contract document translation. The Automate application will keep track of each event throughout the life-cycle of the translation process.

Prerequisites:

- Valid TIBCO Cloud Integration Subscription

[**NOTE**: *There is no direct way to share or export the TIBCO Cloud Live Apps application as of now similar to the other CONNECT products. The feature is on road-map and the product team is actively involved-in.*]

Steps to setup Automate App

You can send an email to '<u>productsolutions@tibco.com</u>' requesting an Automate application and we'll share the same with you ASAP. Please make sure to use the same email address that you've used for TIBCO Cloud Account.

Ex.
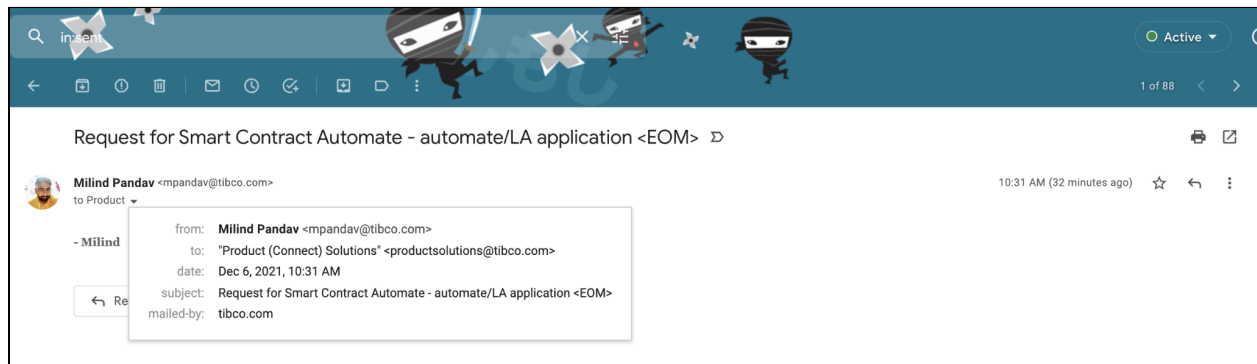

1. Once you send a request for the application, you'll receive an email containing the copy of the TIBCO Cloud Integration - Automate application. You would need to start by activating the copy of the business app shared to you by email (The email will come from <u>no-reply@tibco.com</u>).

A TIBCO Cloud™ Live Apps application has been shared with you

Hi,

Milind Pandav has shared a copy of the **Contract-Case** application with you.

Milind Pandav writes:

> **Here is our low code app for tracking the lifecycle of the contract translation process.**

Please activate your copy of this application. The share will expire after 24 hours.

Activate copy

New to Live Apps? Click here to find out more

Thank you,

Your friends at TIBCO Cloud™

2. Once activated, the app needs to complete a test before it can be published for wider use. Close the Prompt > Click on "Test Application".

3. In order to test further, we have to create a case for the business app. Click New.
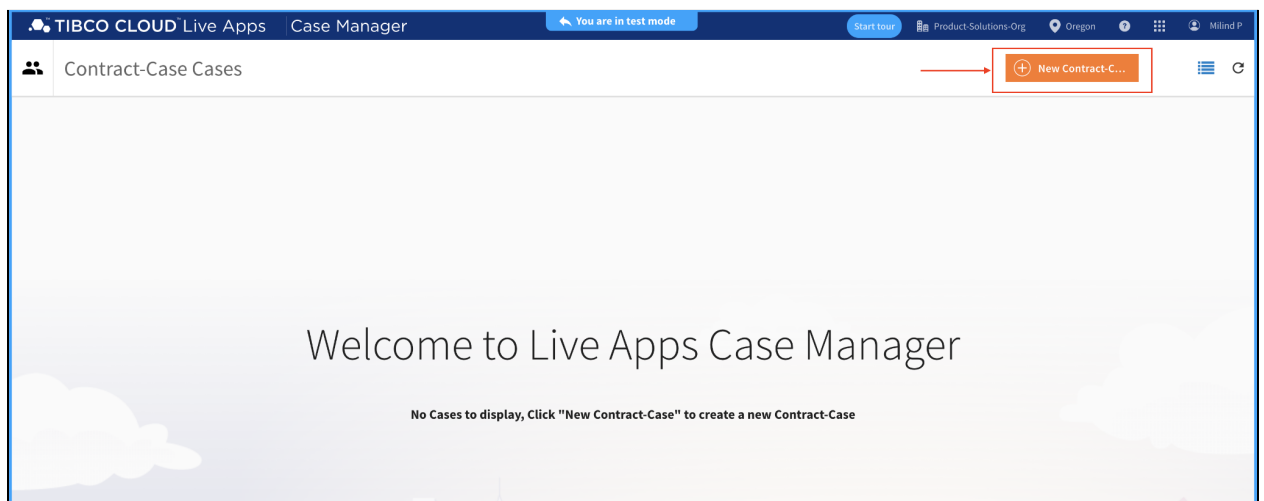

4. Provide values to all the fields and click Submit.

5. Entering these values, creates a 'new case' for the business app we have imported. Close the prompt and open the case.

   In other words, the 'new case' is a simple way to test the business app we imported.

6. An Action has to be taken for this case. Click on the **Process** button to activate flow for this action.
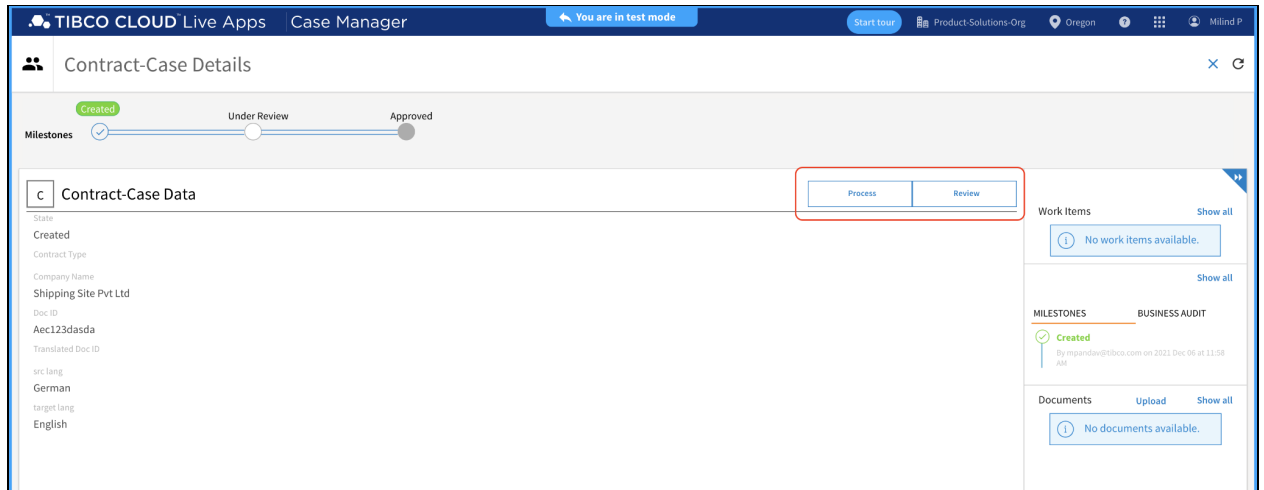

7. Click on the **Review** button to confirm the final translation outcome. You can select **Approved** if you're happy with the translation outcome else keep it in **Under Review**.
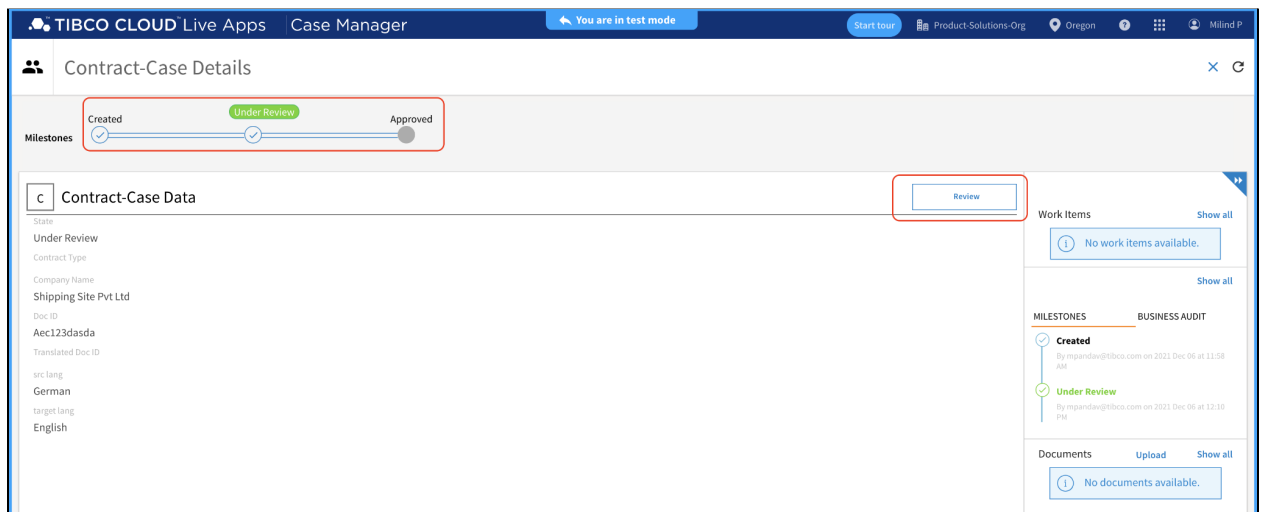

8. Post Approved action, Observe the end state for the case changes to **Approved**. Also, you can monitor/check all the milestones/states through which this case has gone through.

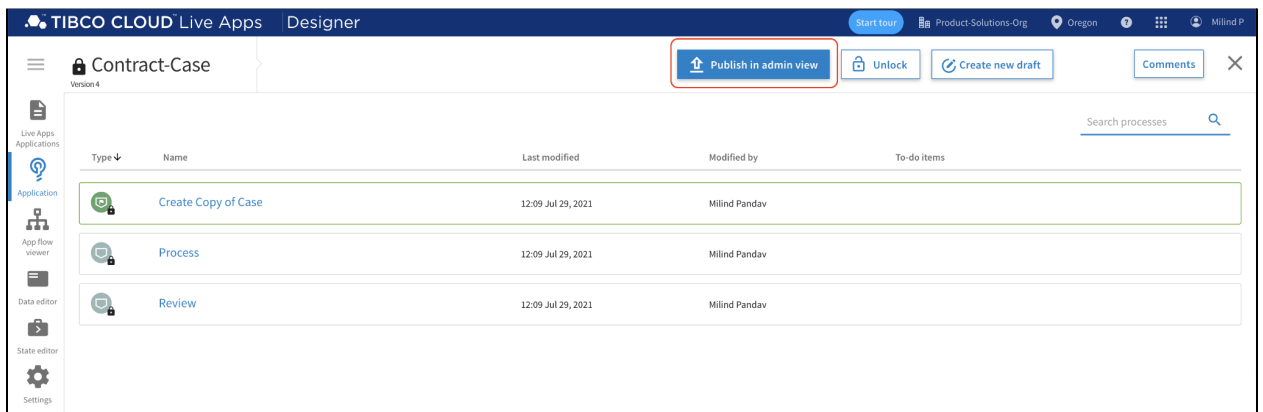

9. The testing is now complete and we are ready to publish the Business App. Click on the arrow as shown below to exit the "Test Mode".
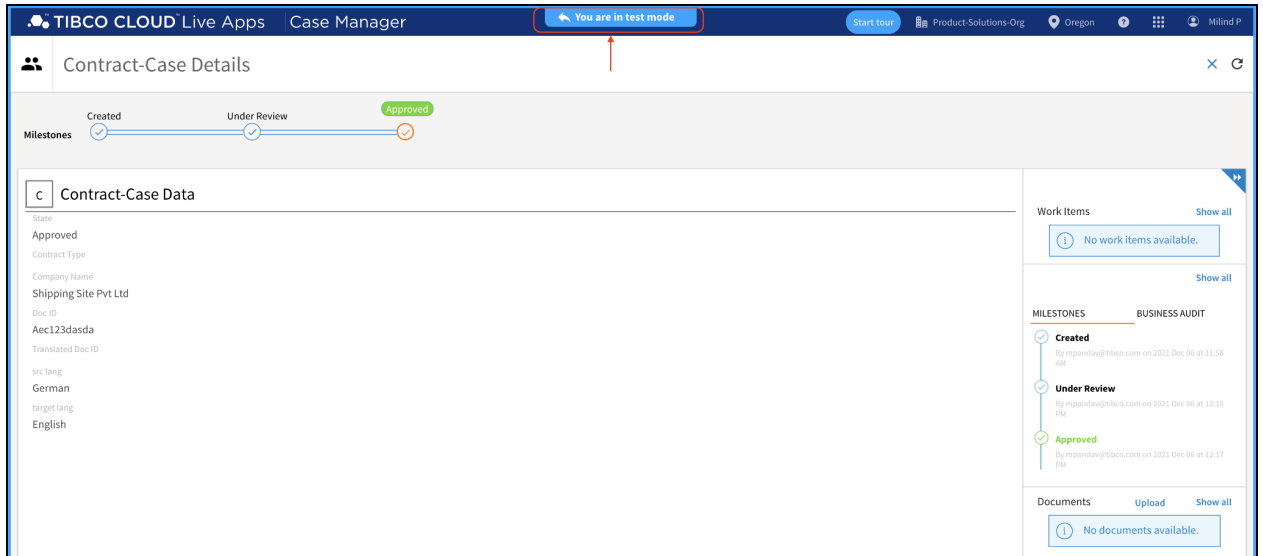

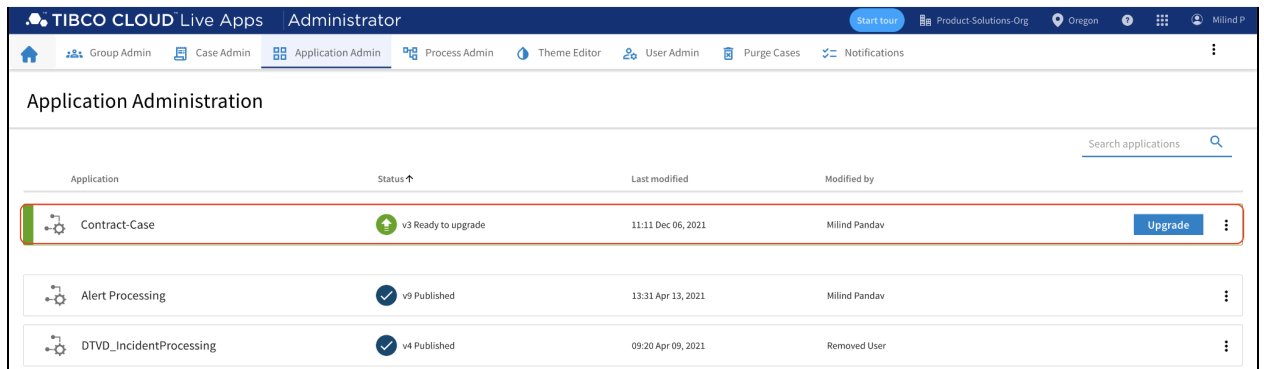

10. Click on the "Lock for Publication".
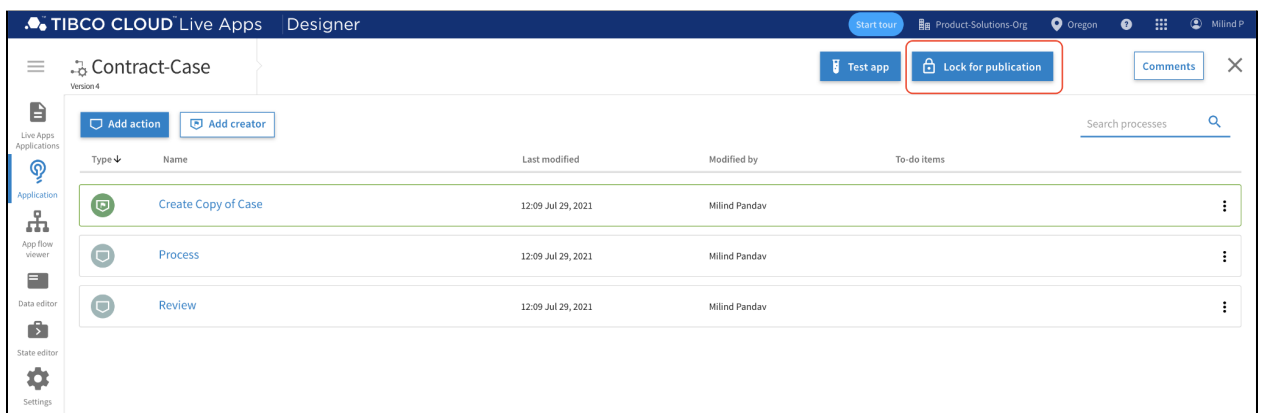

11. The Business is now locked and ready to be published. Click the **Publish in admin view** button.
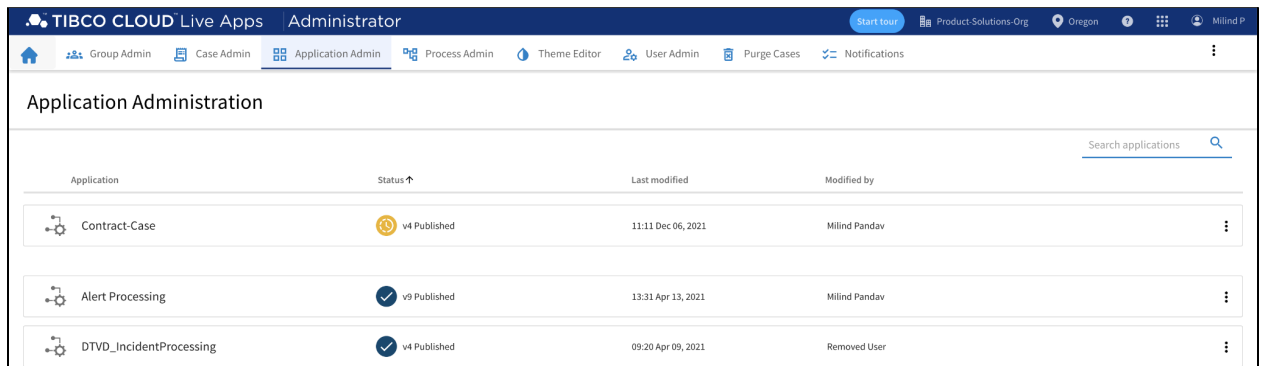

12. The business app is now ready for publication. Click Publish. If you're doing it for the first time then it will show you the Publish button otherwise you'll be presented with the Upgrade option.

13. The business app is now published and ready to be consumed in the Flogo application. Observe the change of state.

Congratulations! You have now activated the Automate Contract Case Business application.
